

Subject: [radiojove-data] 24 Jun 2014 non-Io-A

From: Dave Typinski <davetyp@typnet.net>

To: RadioJove-Data <radiojove-data@lists.nasa.gov>

Here's some weak non-Io-A from this afternoon.

Emission was RCP dominant, L bursting just above background, visible from 16 MHz to 24 MHz.

Jupiter was 16° to 8° off axis.

Jupiter was trailing the Sun by 22°.

It is interesting that after the recent spate of solar flares, the non-Io controlled emission seems to have picked up.
