**To:** RadioJove-Data <radiojove-data@lists.nasa.gov>

Here's some weak non-Io-A from the Friday before the conference.

Emission was RCP dominant, L bursting just above background, visible from 16 MHz to 20 MHz.

Jupiter was 33° to 38° off axis -- perhaps the Western and Pacific observers saw this better?

Jupiter was trailing the Sun by 19°.
