To: RadioJove-Data <radiojove-data@lists.nasa.gov>

Adding to Wes's nice report, here's some non-Io-A from Saturday morning.

RCP dominant L bursting from 16 to 23 MHz. Deep ionospheric lanes visible at 0525 UTC.

Interesting brief N-type event just below 20 MHz at 0530 UTC. Strange in that it is embedded within an L burst.

Jupiter was -21° to $+2^\circ$ off axis.

Jupiter was trailing the Sun by 179° .
